Policy of Alternate Source of Energy and Energy Conservation

The institution has facilities for alternate sources of energy and energy conservation measures:

Use of LED power efficient equipment: The institution has subsequently reduced energy usage through a variety of initiatives, such as better CRT monitor computer utilisation and better LCD and LED computing systems. Likewise, LED bulbs were used in place of the incandescent ones. Every switchboard has a sign indicating the needed use of electricity so that consumption can be decreased and a message about electricity conservation can be conveyed. By turning on the appropriate devices and leaving them on until their use is finished, electricity consumption is controlled. The essential component for controlling how much electricity is used is a master switch. As a result, the institution takes a number of energy-saving measures.

Percentage of annual lighting power requirements met through LED bulbs and other sources.

Alternate Source of Energy:

1) UPS Invertor: One Set of Invertor has been installed in the college. Which is Situated at administrative building for uninterrupted power supply at the most important place parts of the college.

Policy of Water Treatment

Water Conservation Facilities Available in the Institution:

Utilizing water wisely to eliminate wasteful water use is known as water conservation. In order to conserve water, surface and groundwater resources must be protected, managed, and developed, and pollution must be avoided. It is a system that was put in place to manage freshwater, cut down on waste, and safeguard water resources in order to lessen and prevent scarcity.

Rain Water harvesting

A technology called rain water harvesting is used to capture, transport, and store rain for later use. It entails the direct collection and storage of run-off rainwater for subsequent direct usage. One of the most effective practises and procedures used to encourage water conservation is the rainwater gathering system.

The primary objective of rain water harvesting at Govt. Maa Mahamaya College Khadgawan Distt. Manendragarh-Chirimiri-Bharatpur (C.G.) is ground water recharge. Every year, around 95% of the water that is harvested is used to replenish underground water reserves and aquifers. Ground water management using roof top harvesting as a cost-effective way to increase ground water in the campus has been started. Implementing rainwater harvesting is advantageous since it lowers the demand on the available water supply and lowers runoff, erosion, and contamination of surface water

Environmental awareness by making the green campus.

Objective of the practice

The institute is situated in the lap of nature surrounded with hilly areas and plateaus, The whole block known as khadgawan, dist-korea had the dense forest, With the growth of population and greed among the humans caused the expansion of greenery drastically lessened in the most extent. To revitalize the eco-sensibility among the students, the campus has been used as the platform, as the learning stage for the newcomers with academic goals, to carry out the green practice.

- For the sake of planting trees and saving them to sustain the ecology of the zone.
- Removing the plastics from the campus as it is extremely harmful for environments
- just to produce pure oxygen for enhancing the mental and physical health.
- Saving the quality of the soil as hoarding of plastic and lack of plant and trees badly are dangerous for the environment.
- To control the emission of CO₂ in the locality by planting saplings and save them to prevent from the global warming.
- To maintain the water level of the area for over all sustainability of human habitat.
- . Trees control the air pollution and the temperature of the atmosphere and thus retain the utility of respiration

Problems encountered and resources required

The campus area has not been adequately fenced, it needs to be protected with brick wall duly concretized, attempts have been made by the administration and the PWD and forest department are informed about the environmental campaign and the foundation of the oxygen zone and hurdles encountered by the institute, Hopeful to see betterment around the campus in days to come.

- All is dependent on the plantation and protection of trees, right from the shelter, habitat, rain, monsoon, food, and vegetation and moreover the ecological equilibrium. The objective of the practice is that we have already been facing the environmental problem now and then many adverse calamities and catastrophic mishaps have been seen by the generation. This practice is bound to enlighten the students' minds to take responsibilities for the protection of the lovely green planet to face the deadly consequences.

Evidence of success

Every year students bring the different kinds of saplings from home at the time of environment project work, though it is mandatory for them from the examination point of view but as instructed many times by the administration they have to do it dutifully with the concentration of minds and this feed-back has to be spread by them all around, they are committed to save the plants so that their juniors can take the guidelines from them directly or indirectly and the campus can be converted into the beautiful oxygen zone. Their efforts are quite visible and vividly seen at the zone.
